

ASSOCIATION
EXECUTIVES
group

AEG recently developed a branded marketing program for one of our association clients. Members are able to participate in a nationally-branded marketing program at a lower per-member cost, with individual customization. This not only saves the members money, it allows them to participate in a program they wouldn't otherwise afford.

An online print store allows each member easy access to customize the marketing materials with image options and their company logo and information. The print-on-demand feature also enables the members to only purchase the marketing materials they need, as they need them – lowering the overall cost of investment. We are also working with some members to enhance their local marketing efforts.

MUSEUM
SPRINGFIELD ARMORY
NATIONAL HISTORIC SITE
PROJECT CASE STUDY

World-renowned historic museum employs state-of-the-art arms collection storage that greatly enhances protection

The Springfield Armory National Historic Site was the primary center for the manufacture of US military firearms from its inception in 1794 until its closing in 1968. It was declared a National Historic Site in 1974, ensuring the world's first large collection of firearms and edge weapons, with a total collection of more than 12,000 items - 8,500 firearms, 100 edge weapons and 1,500 archeological objects - as well as a library collection of more than 1,500 books and more than 300,000 archive documents and images. Over a six-year period over the years, the collection required a more effective storage solution that would slow corrosion to corrosion and better preserve storage environments with state-of-the-art climate control and security. By utilizing custom-designed high-density mobile storage solutions from Systematics, they were able to condense storage areas and greatly improve preservation integrity.

"We were able to improve the integrity of the preservation methods while saving space and money!"
John Roberts, Chief of Research Management and Curatorial Studies

"Systematics has been wonderful to work with and very responsive to our needs." - John Roberts

CHALLENGE: Research was previously housed in three different storage areas. The historic building, making it difficult to keep safe with over the available fire protection capacity. Systematics provided storage solutions that were able to fit into the existing building structure.

SOLUTION: High density mobile storage was installed throughout a new facility and heavily conditioned with advanced security monitoring, 24/7 climate control and fire protection. The new storage area brought more space, security and improved the quality of collection and the ongoing study.

Many of the storage solutions were employed to provide safe storage of weapons and edge weapons. The storage area was designed to be fire resistant and able to withstand the most severe conditions. The storage area was designed to be fire resistant and able to withstand the most severe conditions. The storage area was designed to be fire resistant and able to withstand the most severe conditions.
